

About Civil Engineering, Its History,

Goals, Provisions of Civil Engineering

Positive Properties

In **Georgia** as in a country which has been striving for the **European** integration there has been carried out intensive building of civil objects with advanced technologies and scientific achievements application; besides, there is an extensive building at the Black sea resorts, airports, sea ports, roads, etc.

There have been built unique constructions with Georgian and foreign architects and engineers' participation.

It is necessary study and adoption of the advanced modern normative documentation to create the abovementioned objects.

In our opinion, European standards, European codes, which application is necessary designing and building of modern constructions have not being adopted quickly enough in Georgia.
